

Geometry Vocabulary

Across

- 2. Opposite sides of the transversal, outside the other two lines
- 4. Two or more objects that share a line
- 6. Place that marks the middle/ half point
- 9. Opposite sides of the transversal, inside the other two lines
- 12. Two or more objects that share a plane
- 14. Part of a line with two endpoints
- 16. Pair of angles on the same side of the transversal and the same side of the other two lines

- 18. Two lines that never touch and are the same distance apart
 - 20. A set of points that is equidistant from the center
 - 21. Two lines that intersect forming right angles
 - 22. Equal/ Same
 - 23. A line that intersects two coplanar lines at two different points
- Down**
- 1. Same distance from two or more objects
 - 3. Non adjacent angle formed by two intersecting lines
 - 5. Two angles that add up to be 180 degrees

- 7. A line that forms a right angle with a segment at its midpoint
- 8. Space inside an object
- 10. Two angles that add up to be 90 degrees
- 11. Distance all the way around an object
- 13. A straight path that never ends
- 15. A dot naming a place
- 17. Two angles with a common vertex and common side but no common interior points
- 19. Formed by two rays with a common endpoint
