

Geometry Vocabulary

Across

3. Points that aren't on the same line.

6. The point about which an angle is measured.

7. A point on a line or line segment that splits it into two equal halves.

12. Line that splits an angle into two equal portions.

13. A pair of adjacent angles formed when two lines intersect.

14. Two angles with a common vertex and side.

15. Infinite in both directions - straight path with no thickness.

Down

1. Either of two angles whose sum is 90 degrees.

2. To add line segments together.

4. Either of two angles whose sum is 180 degrees.

5. A "dot" with no thickness.

8. Points that are on the same plane.

9. A part of a line with one endpoint that goes infinitely in one direction.

10. A flat surface that extends forever with no thickness.

11. Each of the pairs of opposite angles made by two intersecting lines.
