

Geometry

Across

1. Angles inside parallel lines but opposite sides
4. Points on the same line
6. A set of points extending in opposite directions without end
11. Line that intersects a set of parallel lines
13. Supplementary angles on the same side of the transversal, inside parallel lines

14. A set of points extending in all directions without end
15. Angles outside parallel lines but opposite sides

Down

2. Angles on the same side of the transversal, either both above, or below parallel lines
3. Same slope
5. Has 2 end points

7. 2 lines that form right angles
8. Points on the same plane
9. A location
10. Angles formed by 2 intersecting lines
12. 2 rays with the same endpoints
