

Geometry

Across

4. A quadrilateral with one and only one pair of parallel sides
5. A figure formed by two rays with a common endpoint
7. A point where the edges of a figure intersect
9. A polygon made with a continuous line which is always the same distance from the center
10. Abbreviation for "corresponding parts of congruent triangles are congruent"

Down

1. A ray that divides an angle into two congruent angles
2. A quadrilateral with two pairs of parallel sides
3. $\text{Area} = (3.14) r^2$
6. A polygon in which all sides are congruent
8. A parallelogram with four equal sides and equal opposite angles
