

# Geometry

**Across**

- 2. to divide into two parts
- 4. two angles whose sum measures 90 degrees
- 7. a line segment that joins two points on a circle
- 11. describing lines that never meet
- 12.  $(x,y) \rightarrow (y,-x)$  which transformation rule
- 14. the point of intersection of the two rays that form the sides of the angle

15. the distance around a circle

**Down**

- 1. a measure of width, length, or height
- 3. lines that intersect to form right angles
- 5. an infinite number of points that goes on forever in both directions
- 6. The point that divides a segment into two congruent segments.

8. an infinite number of points that has two distinct end points

- 9. a flat surface of points that goes on forever in all directions
- 10. A transformation in which the image is similar to the preimage not congruent
- 13. the amount of surface inside a shape
