

# Geometry

## Across

2. 3-dimensional shape that is round and has a top and bottom in the shape of a circle  
 7. A shape that has a polygonal base and triangles for sides  
 8. An angle that is 90 degrees  
 9. 3-dimensional shape that has a flat base that connects to a point

10. The distance around a 2-dimensional shape  
 12. Also called the Mirror Line  
 13. An angle between 90 to 180 degrees  
 14. 3-dimensional object that has six sides that are all rectangles

## Down

1. An angle greater than 0 but less than 90

3. Two lines that never intersect  
 4. A four sided shape  
 5. A perfectly round 3-dimensional object  
 6. Two shapes that are the same size and shape  
 11. 3-dimensional solid object with six square faces or sides  
 15. Used to find the size of a surface or object
