

Geometry

Across

3. $\frac{1}{2} b \cdot h$
7. if two angles and non-included side of a triangle are congruent to two angles and non-included side of another, triangles are congruent
8. llr^2
9. if two sides and included angle of a triangle are congruent to two sides and included angle of another, triangles are congruent
10. two angles that add to 90

Down

1. if three sides of a triangle are congruent to the corresponding sides of another, triangles are congruent
2. base times height
4. if two angles and included side are congruent to two angles and included side of another triangle, triangles are congruent
5. two angles that add up to 180
6. side times side
