

Geometry terms

Across

- 2. Which segments cross each other
- 6. Which polygon has 4 sides
- 10. Which is less than 90 degrees but more than 0 degrees
- 13. Which 2 line segments cross to form a 90 degree angle
- 15. What quadrilateral figure has 2 parallel and 2 nonparallel sides
- 16. What curve has a continuous and has endpoints that meet at the same point
- 18. Which angle is greater than 90 degrees but less than 180 degrees
- 19. Which triangle has 2 equal sides

- 20. Which line segment do not intersect

Down

- 1. What triangle has three unequal sides and angles
- 3. Which rectangle has all 4 sides of equal length
- 4. What is a triangle that has all equal sides and angles
- 5. What quadrilateral has both pairs of opposite sides parallel to each other
- 7. Which angle has a 90 degree angle

- 8. What has a straight line passing through the center of a circle or sphere and meeting the circumference or surface at each end

- 9. Which segment has one part of a line
- 11. What is a continuous extent of length
- 12. What is a position in space
- 14. What equilateral parallelogram has an oblique angles
- 17. Which polygon has six sides and six angles

Word Bank

Line	Intersecting line segment	Closed Curve	Quadrilateral
Scalene triangle	Equilateral Triangle	Hexagon	Isosceles triangle
Square	Rhombus	Obtuse Angle	Diameter
Perpendicular line segments	Acute Angle	Trapezoid	Right Angle
Parallel line segments	Point	Parallelogram	Line segment
