

Goat Parasite Symptoms

Across

7. Animals try to get oxygen into their damaged lungs.
8. Animals keep their head and ears down and are not willing to stand for long periods of time.
10. Animals are easier to catch or unstable when walking.
11. Animals have fluctuant swelling under the jaw from the accumulation of fluid (submandibular edema). Sometimes it can spread to under the abdomen.

Down

1. Detected by dirty tail and hind end
2. Animals cough from the irritation of their damaged lungs
3. In late stages of the disease
4. When nutrients are insufficient, the animals' hair loses its luster.
5. in early stages of the disease
6. Animals don't get all the nutrients they need.
9. Animals' gums, perineum, and eyes appear white due to blood loss
