

# HIV Treatment

## Across

**5.** Medication that people take after being potentially exposed to HIV to prevent becoming infected

**9.** when a virus is able to completely fight off the drug, making the drug ineffective. Limits the options of medication that a person can go on.

**10.** side effect of HIV treatment, feeling of sickness with an inclination to vomit

## Down

**1.** medication taken to treat HIV. They do not cure or kill the virus but they can prevent the growth of the virus

**2.** the ability for a patient to stick firmly to their HIV regimen every day and exactly as prescribed

**3.** HIV medication side effect, sensation of spinning around and losing one's balance

**4.** state or condition of lacking strength- can be a side effect of HIV medications

**6.** prescribed course of HIV medicines to treat HIV infection

**7.** extreme tiredness potentially from HIV treatments

**8.** Medication that people with high risk for HIV take to lower their chances of getting infected
