

HLTINF001 Microbiology Terms

Across

1. Impaired state caused by pathogen
4. Invasion & multiplication of pathogenic microorganisms in host causing cell injury
9. An individual single cell organism
10. A bacterial form with a thick outer wall and high tolerance to hostile environment
12. Biological information stored in cell, needed to reproduce another cell

13. The multiplication of microorganisms in host without cell damage
 14. Organism capable of causing disease only when host resistance is lowered
- Down**
2. Organisms that live off decaying matter; make up natural flora
 3. A person at high risk of infection with lowered immunity

5. By-product of fungi causing diseases, symptoms in humans
6. How frequently a pathogen causes disease
7. Single cell organism without nucleus that can multiply quickly
8. The study of plants and animals not visible to the eye
11. A microorganism that invades other cells to survive
