

HUMAN BODY

Across

3. This is made up of the brain, spinal cord, and nerves.
7. This system is our body's defense against infections and diseases.
8. This system brings air into the body and removes carbon dioxide.
9. This system is a defense system. It filters out organisms that cause disease, produces white blood cells, and generates disease-fighting antibodies. It also distributes fluids and nutrients in the body and drains excess fluids and protein so that tissues do not swell.
10. This system is made up of a group of glands that produce the body's long-distance messengers, or hormones.

Down

1. It is made up of a group of organs that transport blood throughout the body.
2. This is made up of tissues that work with the skeletal system to control movement of the body.
4. A system that is made up of bones, ligaments and tendons.
5. This system eliminates waste from the body.
6. This system is made up of organs that break down food into protein, which the body needs for energy, growth, and repair.
