

Heredity Vocabulary

Across

- 3. An alternate form that a gene may have for a single trait; can be dominant or recessive.
- 4. An offspring that was given different genetic information for a trait from each parent.
- 6. Describes an organism with two alleles that are the same for a trait.
- 8. Describes a trait that is covered over, or dominated, by another form of that trait and seems to disappear.
- 9. A tool to predict the probability of certain traits in offspring that shows the different ways alleles can combine.

- 10. The genetic makeup of an organism.

- 11. Describes an organism with two different alleles for a trait.

Down

- 1. The passing of traits from parent to offspring.
- 2. The study of how traits are inherited through the actions of alleles.
- 5. Describes a trait that covers over, or dominates, another form of that trait.
- 7. Outward physical appearance and behavior of an organism as a result of its genotype.
