

Hospital Acquired Pressure Injuries

Across

5. What is a non-modifiable risk factor of development of HAPI
6. Which medical device was more often attributed to an unavoidable HAPI
8. Unit with high incidence of HAPIs
10. Main factor distinguishing avoidable and unavoidable: Had more _____ documented
11. Percentage of HAPIs determined to be avoidable

12. When preventative interventions are not _____ and implemented: avoidable HAPIs occur

13. Which area of the body are pressure injuries most frequently seen

14. Turning and patient _____ are interventions that can prevent HAPIs

Down

1. _____ of stay can increase risk of unavoidable HAPI

2. Percentage of participants with HAPIs that were mechanically ventilated

3. Term that refers to damage to skin and underlying tissue

4. _____ penalties can occur when a patient develops a HAPI

7. One of the 5 predictors of acute skin failure

9. Which group had higher Braden Scale total score (avoidable or unavoidable)
