Date: _____

How well do you know your terpenes?

Across

- 5. With its herbal minty scent, this can be found in herbs like rosemary, mint, and camphor.
- 7. The second most abundant terpene in all cannabis strains, but not all strains necessarily have it
- 9. Twin terpenes smell like pine trees which is also where they can be found in large amounts
- 10. The best way to describe the smell of this is fir needles, musky earth, and damp woodlands

- 11. The most responsible for the recognizable marijuana smell with its spicy and floral notes
 - 12. It was the first terpene found in hops. Its aroma contains earthy, woody and spicy notes
- Down**
- 1. This is a secondary terpene, found mostly in flowers like jasmine, lemongrass, and tea tree oil
 - 2. This terpene got its name from sweet Valencia oranges – where it’s present in large amounts

- 3. Best known for its spicy and peppery note, it is also found in black pepper, cinnamon, and cloves
- 4. It can be best described as floral-like, reminiscent of lilacs, apple blossom, and a little bit citrusy
- 6. This can be found in lemons and tobacco; its smell resembles a mixture of rose grass, peaches, and plums
- 8. The most abundant terpene in cannabis, which is where it’s mostly found in nature
