

Name: _____

Date: _____

Hydrologic Cycle

Across

3. The process where water MOVES THROUGH soil or rock
6. The process where water vapour (gas) is transformed directly into solid water (snow, ice)
8. The state change directly from solid water (snow, ice) to water vapour
9. The largest sources of water on the planet, bigger than seas
11. The process where water vapour transforms into droplets of liquid water, making clouds

Down

1. The process where condensed water falls to earth as rain, hail, fog-drip.
2. The process where water liquid becomes water vapour
4. The process where water ENTERS the soil or rock surface
5. The release of water vapour from plants and soil
7. White, visible collections of water vapour in the sky
10. The source of electromagnetic radiation which falls onto the Earth's surface
