

Hydrosphere and Biosphere!

Across

- 2. Resources and ecosystem services on which life depends.
- 6. All external conditions, factors, matter, and energy, living and nonliving, that affect any living organism or other specified system.
- 8. Dominates the distribution of water.
- 9. The process where solar energy warms the troposphere as it reflects from Earth's surface and interacts with greenhouse gases.
- 10. One or more communities of different species interacting with one another and with the chemical and physical factors of their nonliving environment. (Hint: Nutrient cycles and energy flows through it)

Down

- 1. Contamination of the environment by any chemical or agent that is harmful to the health or survival of organisms.
- 3. The gaseous, liquid, and solid water on Earth's surface
- 4. The part of the spheres where life exist
- 5. Continual movement of the elements and compounds that make up nutrients through air, water, soil, rock, and living organisms within ecosystems.
- 7. Glaciers, lakes, rivers, and aquifers make up a portion of the hydrosphere and are examples of _____
