# Immune System

## Across

- 2. targets infected cells
- 7. filter lymph
- 9. white blood cells that search for pathogens
- 15. permeable and have minivalves
- 16. empties lymph into venous circulation
- 18. response triggered by damaged tissue
- 19. kills bacteria
- 20. permeable and have mini valves

## Down

- 1. T lymphocytes become immunocompetent lymphocytes
- 3. produce plasma cells that secrete antibodies
- 4. specific
- 5. trap bacteria
- 6. antibody mediated immunity
- 8. form of active immunity that is artificially aquired

- 10. chemical that regulates immunity, inflammation, and hematopoiesis
- 11. in body fluids and mark antigens for destruction
- 12. nonspecific
- 13. stores body platelets
- 14. system response and regulated by the hypothalamus
- 17. manage immune system response and kills infected cells
