

Introduction to Physiology

Across

1. Movement of substances within the body in body fluids
3. Passages of substances through certain membranes
4. What is the process of making a new individual called?
6. What process breaks down the food that enters the body?
9. Changing of absorbed substances into forms that are different from those that entered body fluids

11. Ability to sense changes taking place inside or outside its body and react to it
12. What is a form of energy that is needed to maintain life?
13. Removal of wastes that body parts produce as a result of their activities
14. What percent of humans are water?

Down

2. How does the body maintain a stable internal environment?

5. The study of the functions of the body parts
7. A branch of science that studies the structure of body parts
8. A medical process that does not require the opening of tissues or skin
10. Process of obtaining oxygen to release energy from food and remove waste
