

# Journal Club

## **Across**

4. Test for strength of association between two continuous variables  
 5. Committee that ensures research is conducted in an ethical manner  
 11. Statement to help with conducting an electronic literature search for latest evidence  
 14. Synthesizes recent research from current studies  
 16. Formal statement of the expected relationships between two or more variables  
 17. Striving for excellence in research  
 18. Ranking between data points, not necessarily equal

19. Prepares researchers for a larger study

20. Studies that collect and analyze data about cultural groups

## **Down**

1. Process of synthesizing and describes results from numerous studies  
 2. A written form used to document a subject's agreement to participate in a research study  
 3. Response, behavior, or outcome that is predicted and measured  
 6. Test assess if change in one variable predicts change in another variable

7. Focus of data that focuses on attitudes and perceptions

8. Subjects not exposed to the experimental treatment

9. Systematic process to describe test relationships

10. Summary of research that includes research question, methods and findings

12. psychological response of changing behavior when in a research study

13. Influencing factor that can change study results

15. A group of individuals with a common trait in a study or trial
