

# Kinesiology

## Across

2. What ligament attaches anteriorly and posteriorly to the radial notch of the ulna?  
 5. What muscle is believed to clear the joint space of the annular ligament to allow for full elbow extension?  
 8. What is the innervation for the triceps brachii muscle?  
 9. What part of the distal humerus (anterior) articulates with the radius?

10. How would you stretch the elbow flexors?

11. What type of end feel should you feel at the elbow joint when flexing?

12. What muscle is a synergist with biceps brachii for supination?

## Down

1. What muscle inserts on the coronoid process and ulnar tuberosity of the ulna?

3. What bone does not move during pronation or supination?

4. What is the action of the pronator quadratus muscle?

6. What is the gravity eliminated position for to perform elbow extension?

7. What is the innervation for the pronator teres muscle?
