

Life Functions

Across

- 3. What explains how organisms inherit traits from parent(s).
- 8. What life function Is an increase in size brought about by increases in cell size and cell number?
- 10. What life function includes the absorption of materials into the body fluids or through cell membranes and circulation?
- 11. What life function processes food for the use of a organism?

12. What involves chemical reactions in which small molecules combine to form longer ones.

13. What life function results in the production of new individuals?

Down

- 1. What involves the control and coordination of life functions?
- 2. What life function must an organism must carry on to sustain life?
- 4. What life function includes all the activities involved in the elimination of cellular waste?

5. What includes the chemical activities that release energy from organic molecules, for the cell's use?

6. What is the maintenance of a stable internal environment in spite of changes in the external environment?

7. What life function removes solid wastes?

9. What life function obtains food from the environment?
