# Life Processes

## Across

7. The orange/yellow dusty substance produced by the stamen(which is carried around during pollination).
8. The small leaves that protect the developing flower.
9. The process by which the plant uses the sun's energy, carbon dioxide, & water to make food(glucose & oxygen)?
10. The period of suspended life process brought on by change in the environment.

## Down

1. The green pigment(color) in the plant.
2. These form in the ovary after being fertilized by the pollen.
3. What makes the seeds & attracts birds & bees(pollination)?
4. The female part of the flower involved in reproduction.
5. The male part of the flower involved in reproduction.
6. What anchors the plant & takes in water & nutrients from the soil?
