

Name: _____

Macromolecules

Across

5. large organic compound composed of one or more amino acid chains
6. any carbohydrate made up of any two link monosaccharides
8. a double stranded nucleic acid that codes genetic information
9. an unhealthy fat that is solid at room temperature and contains only carbon to carbon SINGLE bonds
10. any carbohydrate made up of long chains of monosaccharides

Down

1. large organic compound that contains the genetic code for an organism
2. organic compound that includes starches and sugars
3. organic compound that is insoluble in water that includes oil, fats and waxes
4. a carbohydrate in its simplest form - a monomer
7. a nucleic acid that carries instructions from DNA for controlling the production of proteins
