

# Male Reproductive System

## Across

1. Site of sperm production
3. Stem cells that begin meiosis in male
5. Responsible for moving testes to keep temperature optimum
8. Haploid round cell produced by meiosis
14. These accessory glands are located on either side of the membranous urethra
16. Cells that make testosterone
19. Cells that make inhibin to control the rate of spermatogenesis

20. Wrinkling of the scrotum is caused by this muscle

21. Meiosis II is this type of division

## Down

2. A cell in Meiosis II in the male
4. Cytoplasmic rearrangement following meiosis in male
6. Product of seven glands in male
7. Formed by the union of the seminal vesicle duct and the ductus deferens

9. Erectile tissue surrounding the urethra

10. Canal through which testes descend

11. Meiosis in the male

12. This accessory gland contributes to the motility and viability of sperm

13. These accessory glands add fructose to semen

15. Site of sperm maturation

17. The release of semen following sexual excitement

18. Meiosis I separates these
