

Marine biology

Across

1. spiders are apart of what family group
 5. centipedes are apart of what family
 7. the scientific name is animal-wanderer
 11. the study of marine organisms, their behaviors and their interactions with the environment
 13. organisms that eats for energy
 15. the ability to work
 16. . . . live attached to the intestinal l wall of humans and other animals

17. a linear network of links in a food web starting from producer organisms and ending at an apex predator species, detritivores, or decomposer species.

18. the plankton distribution for when plants need sun and different levels of the sun

Down

2. a graphic representation of a food chain that includes biomes
 3. organisms that are able to swim or move independently of currents
 4. snails are apart of what family
 6. the scientific name for plant-wanderer

8. wind patterns and currents push water up towards the surface
 9. organisms that are unable to propel themselves and they float and drift in the current

10. microscopic algae that produce toxins that kill fish and make shellfish dangerous to eat. The toxins may also make the surrounding air difficult to breathe
 12. they absorbed energy from the sun

14. plankton distribution where different earth position dictate sunlight intensity
