# Math Class

Across

2. A quadrilateral with exactly one pair of parallel sides
5. To share a common point or points
6. A number that names part of a whole
10. A counting number greater than 1 whose only factors are the number 1 and itself
14. A segment whose endpoints lie on a circle
15. A ratio of two measures
16. A line that intersects one or more other lines in a plane
18. The perimeter of a circle
20. A value of a radical expression
23. A list of all the possible outcomes of an event
26. The result of division
27. A geometric solid whose sides are perpendicular to its base
28. A closed flat shape with straight sides

Down

1. The top term of a fraction
3. The changing of a figure's position through rotation, reflection, or translation
4. A polyhedron with two congruent parallel bases
7. The location of the number 0 on a number line
8. the price of one unit of measure of a product
9. The size of the inside of a flat shap, measured in sq units
11. 1 of 2 or more numbers that are added to find a sum
12. The middle number of a list of data when the numbers are arranged in order from least to greatest
13. The distance from the center of a circle or sphere to a point on the circle or sphere
17. a triangle with three sides of different lengths
19. A number whose value does not change
21. A flat surface of a geometric solid
22. A part of a line that begins at a point and continues without end in one direction
24. Lines in the same plane that do not intersect
25. A statement that shows two ratios are equal
