

Math Cross Word

Across

- 3. A quadrilateral with exactly two parallel sides.
- 4. The sum obtained when any two or more numbers are multiplied together.
- 5. Two halves which match perfectly.
- 6. Not infinite. Finite has an end.
- 7. A straight line with one endpoint. The line extends infinitely.
- 9. The solution to a division problem.
- 13. A six sided and six angled polygon. Hex means 6.
- 16. A ratio or fraction in which the second term on denominator is always 100.

- 18. A line that crosses/intersects two or more lines.
- 19. A line in which points all correspond to numbers.
- 21. A triangle with three unequal sides.
- 23. The likelihood of an event happening.
- 24. Whole numbers, positive or negative including zero.
- 25. A polynomial having a degree of 4.

Down

- 1. To calculate the numerical value.
- 2. A value that doesn't change
- 8. Two angles are supplementary if their sum totals 180°.

- 10. An angle that is 90°.
- 11. A whole number that is not divisible by 2.
- 12. The segment which joins two points on a circle.
- 14. Two dimensional shapes are often referred to as figures.
- 15. A unit of measure that equals 1000 meters.
- 17. A parallelogram with four equal sides, sides are all the same length.
- 20. The unit of an angle, angles are measured in degrees shown by the degree symbol: °.
- 22. An equation that is true for values of their variables.
