

Math Terms

Across

4. A ray which divides an angle into two congruent angles, each half the original angle
 8. The measurable part of a line consisting of two endpoints
 11. A part of a line with one endpoint and all the points extending in one direction
 12. A flat surface extending in all directions
 13. The unit of measure for angles

14. There is exactly one line that can be drawn between two points

15. Points that lie on the same line
 17. A location that has neither width or length
 18. A set of points in a plane
 19. the point in which two geometric figures have in common

20. points of the same plane

Down

1. an angle whose measure is greater then 90

2. The smaller region of the two regions of an angle

3. A line that is perpendicular to a segment at its midpoint

5. Same size same shape

6. An angle whos measure is exactly 90

7. An angle whose measure is less than 90

9. The same distance

10. The union of two rays that share a common endpoint

16. Two rays with a common endpoint which form an angle whos measure is 180
