

Math Vocabulary

Across

2. a measurement of steepness in a line
 5. a factor that is common to all terms of an expression or to two or more expressions
 9. a value that does not change
 11. the number that indicates how many times the base in a power is used as a factor
 13. a number or expression that is multiplied by another number or expression to get a product
 16. a value that is substituted for the independent variable in a relation or function

18. the set of all first coordinates (or x-values) of a relation or function

19. a polynomial with three terms
 20. the closeness of a given measurement or value to the actual measurement or value

Down

1. a number that is multiplied by a variable
 3. a line that a graph gets closer to as the value of a variable becomes extremely large or small
 4. the value or values that occur most frequently in a data set

6. the middle number in a data set

7. the result of substituting a value for a variable in a function
 8. the side opposite of the right angle
 10. the sum of all the values in a data set divided by the number of data values
 12. a mathematical statement that two expressions are equivalent
 14. the difference of the greatest and least values in the data set
 15. information gathered from a survey or experiment
 17. a polynomial with two terms
