

Math Vocabulary Cross Word

Across

- 4.** A line with two points.
7. Two angles that equal 180 degrees
10. When two points lie on the same line or line segment.
12. When all three sides on a triangle are the same
13. A line that intersects two lines, this line is called a _____ line
16. When at least 2 of the sides on a triangle are the same.
17. Part of a circle
18. When two points of the angle point in complete opposite direction.

- 19.** Two angles split in two.
20. Two angles that shares a ray, together they equal 180 degrees.
21. When two angles are on the same side of the transversal line while in between the two lines.
22. Two angles whose sum is 90 degrees.

Down

- 1.** Another word for equal.
2. When both angles are on the same side of the transversal line but one in the interior and the other on the exterior.
3. Two angles that share a ray.
5. Where two angles meet.

- 6.** When two angles are on the opposite sides of a transversal line but out of the two lines.
8. When two angles are on the same side of the transversal line while both are outside the two lines.
9. When two angles are on the opposite sides of a transversal line but in between the two lines.
11. When all three sides are of different values.
14. Two lines that intersect to make a 90 degree angle.
15. Two angles that are opposite of each other, they both equal the same.
