

Medical Terminology

Across

2. injury to a ligament
5. Bone cells that absorbs bone tissue
6. The distal end of a muscle
11. When something is closer to the skin
12. Type of synovial joint that only permits flex/ext
16. The type of joint that movement occurs at
18. When something is farther from the skin
19. How we communicate the severity of a sprain

20. Type of contraction where the muscle shortens

21. A complete separation of a joint
22. A movement that is a combination of flex, ext, abd, add
24. The proximal end of a muscle

Down

1. Type of synovial joint that only permits for rotation
3. Injury to a muscle
4. Cartilage found in the ears
7. A thin structure that helps to reduce friction
8. Structure that attaches bone to bone

9. Ankle movement where the toes are pointed

10. Cartilage found in intervertebral discs and menisci
13. A partial separation of a joint
14. Type of contraction where there is no change in muscle length
15. Cartilage found between ribs and at the end of long bones
17. Type on contraction where the muscle also lengthens
23. Structure that attaches muscle to bone
