Date: _____

Memory

Across

- 1. Tendency to falsely believe that they would have accurately predicted an outcome without having been told about it
- 4. Active system that processes the information in short term memory
- 5. Type of memory retrieval in which information is "pulled" from the memory with few external cues
- 7. Ability to match a piece of information or a stimulus to a stored image or fact

10. Ability to access a visual sensory memory over a long period of time

12. Loss of memory due to the passage of time

13. Mental operations that people perform on sensory information to convert it to a form that is usable

Down

2. Physical change in the brain that occurs when a memory is formed

3. Visual sensory memory that lasts only for a fraction of a second

6. This type of memory lasts only 2-4 seconds

8. Getting information they know out of storage

9. Holding on to information for a period of time

11. This system receives information from the senses, puts it into a usable form, organizes it and retrieves the information from storage.
