

Microbiology

Across

2. tube media where red indicates alkaline and yellow indicates acidic
 5. shape of cells that resemble a pin prick
 6. part of the microscope that is used to lift
 8. test used to determine presence of mastitis
 14. a counterstain that is the last step in a gram stain
 15. the color that gram negative bacteria appear

16. test that can determine if Staphylococcus is pathogenic
 17. arrangement of multiple cells linked together resembling a bunch
 18. test used to identify aerobic gram positive bacteria
 19. the piece of the microscope that is used to change lenses
 20. media used to culture Dermatophyte specimen

Down

1. type of inoculation loop that should be used for an oxidase test

3. knob that raises and lowers the microscope stage
 4. tube media that turns blue when positive
 7. arrangement of multiple cells linked together in a line
 9. the color that gram positive bacteria appear
 10. shape of cells that resemble a minus sign
 11. tube media where bright pink indicates a positive result
 12. production that is indicated after adding kovac's reagent
 13. platform on a microscope that the slide sits on
