

Minerals and Rock Formation

Across

- 2. A rock that forms from other rocks as result of intense heat, pressure, or chemical
- 4. A naturally occurring solid mixture of one or more minerals or organic matter
- 6. Rocks that forms when magma cools and solidifies
- 7. The molten or partially molten rock material containing trapped gasses produced under earths surface
- 8. The rising of regions of earths crust to higher elevations

- 10. The series of processes in which rock changes from one type to another is called rock

Down

- 1. _____ igneous rock
- 3. Magma that flows onto earths surface
- 5. When minerals that form from solutions or sediment from older rock _____ Rock
- 9. When _____ cools on earths surface is called _____
