

# Mining and the environment

**Across**

- 2. Huge amounts of waste rock are left on \_\_\_\_\_.
- 5. When the mineral to be mined lies deep below the surface \_\_\_\_\_ takes place.
- 8. Miners dig the ore from the \_\_\_\_\_.
- 9. Most of the pollution caused by mining is a result of the \_\_\_\_\_ material
- 10. The \_\_\_\_\_ from the surface to the ore are called shafts.

**Down**

- 1. open pit mining causes a huge amount of \_\_\_\_\_, which causes air pollution.
- 3. The ore has to be crushed and the mineral is removed by a \_\_\_\_\_ process.
- 4. \_\_\_\_\_ take miners down the shafts to the different mining levels.
- 6. The rock containing the mineral is called \_\_\_\_\_.
- 7. \_\_\_\_\_ mining can be done when the ore is near the surface.
