

Mirrors and Lenses

Across

5. Is a flat sheet of glass that has a smooth, silver colored coating on the side.
7. Forms when light rays actually meet.
8. An imaginary line that divides a mirror in half.
9. Is thicker at the center than the edge
10. A mirror that curves inward like the inside of a bowl.

Down

1. Is thinner in the center than at the edges.
2. An image that forms where light seems to come from.
3. The point at which rays parallel to the the optical axis reflect and meet.
4. Mirror with a surface that curves outward
6. Curved piece of glass or other transparent material that refracts light
