Name: _____   Date: _____

Module 1 Lessons 1-10

Across

4. The first factor in a multiplication problem

9. What we call the answer to a division problem

10. Breaking a total into equal groups

11. Arrangement of objects into rows and columns

13. The order of the factors does not matter, the total stays the same!

Down

1. Combination of numbers that do not make a total (no equal sign)

2. What we call the answer to a multiplication problem

3. Adding a number to itself a certain number of times

5. Combination of numbers that create a total (equal sign)

6. Vertical group in an array

7. The number of objects in a group

8. The numbers we multiply

12. Horizontal group in an array
