

Monomer Liquid & Polymer Powder

Across

3. The Monomer in the nail enhancement is the _____ portion.
 4. What is the Benzoyl peroxide that is in the polymer to assist in the chain reaction?
 7. What is the nail art that is placed between two layers of nail enhancements?
 11. Equal part of liquid and powder will create a _____ bead.
 15. Monomer liquid consist of ethyl _____.
 16. If not enough powder is used for a bead it will be _____.
 17. Polymer and Monomer nail enhancements are also known as _____ nails.

18. Gloves made from _____ polymer powder work best.

19. Monomer is one unit called a _____.

20. What type of primer is more corrosive?

21. Leftover liquid should be put in a _____ than placed into a plastic bag.

22. What is the chemical reaction called that hardens the overlay?

Down

1. What is another name for the tacky layer?

2. What is added to the liquid to speed up the curing time?

5. What is used to help adhesion of the nail enhancement?

6. What does poly mean?

8. Using a dappen dish will minimize _____.

9. _____ is applied to the natural nail to remove moisture.

10. The amount of monomer and polymer used to create a bead is called _____.

12. The Polymer portion in the nail enhancement is the _____.

13. The best brushes to use for monomer and polymer are made of _____ hair.

14. More liquid than powder will create a _____ bead.
