Date: \_\_\_\_\_

# Moon

## Across

**10.** A full moon which doesn't fit into the months on a calendar

**11.** Something which gets pulled in by planets with large gravitational pulls

**12.** The moon is a satellite to \_\_\_\_\_

**13.** A very rare sight which occurs when gas and smoke particles scatter the red light

## Down

**1.** Something which allows large gaseous planets to 'reel in' satellites and celestial bodies

**2.** The term which refers to 59% of the moon showing in total

**3.** A phenomenon which occurs when the Earth blocks out the sunlight shining onto the moon

**4.** Something which is decreasing due to the moon leaving Earth's gravitational pull

**5.** Something which slows the Earth's rotation by 2mm per century

**6.** a phenomenon which occurs when the moon blocks out the Sun's light

**7.** Something the moon is losing which is also keeping the moon from leaving Earth's gravitation

**8.** The part of the moon which you normally can't see on Earth

**9.** The moon's orbit is not in a perfect circle but instead \_\_\_\_\_
