

Moving around the sun

Across

5. A satellite is a body that orbits another body.
6. The stars cluster together in groups called galaxies.
8. The sun and all the planets that move around the sun.
10. Turning around in a circular motion.
11. Bodies that move around a sun, for example, Earth.

Down

1. Lumps of frozen gas and dust.
2. A pulling force that very large objects exert on the things around them.
3. Pieces of space rock that enter the Earth's atmosphere.
4. The galaxy that we are part of.
7. Irregular shaped lumps of solid matter that orbit the sun.
9. Star in the centre of the solar system that we are part of.
