

Muscular System

Across

1. Categorization of skeletal muscles allow them to move ____.
3. Moves along the back of the thigh and flexes knee.
4. Rhythmic, involuntary muscle
8. Neurons that form electrical impulses via axons are called ____.
13. Attached to calcaneus, flexes knee.
18. Muscle that closes anal canal
20. Major role in contractions.
23. Muscle that raises the jaw
24. Layer of connective tissue that surrounds skeletal muscle.

25. Broad, fibrous sheets that attach to bone, skin, and connective tissue.

26. Holds spine up
27. extends the big toe

Down

2. skeletal muscle move ____.
5. Muscle that flexes wrist
6. Muscle that closes the jaw
7. Separates the neuron from the muscle fiber.
9. Muscle that adducts arm and flexes shoulder
10. Skeletal muscles are surrounded and separated by

11. Muscle on outside of eight lower ribs.

12. Muscle that elevates the scapula
14. Muscle that extends hip
15. Bi-product of cellular respiration.
16. Muscle that extends elbow
17. Needed for contraction of muscle
19. Muscle that extends elbow
21. Muscle that flexes knee and raises the thigh
22. Muscle fibers that rotate the scapula.
