

NWEG crossword puzzle

Across

- 2. the time latency to deliver a unit of data over a link or a network
- 5. this layer is responsible for the presentation of exchanged data
- 8. a family of wired computer networking technologies commonly used in local area networks
- 10. component of a computer's internal hardware that is used for communicating over a network with another computer
- 12. systems that switch data among stacks at the DLC layer
- 13. protocol employ methods for bit transmission over physical media
- 15. this layer enables and manages sessions for complete data exchange between end nodes

- 16. this layer includes protocols that implement or facilitate end to end distributed applications over the network
- 17. a parameter that measures completion rates of fundamental data units
- 19. the ability to continue operation despite component or link failures
- 20. through which packets are sent and received to/from the network

Down

- 1. the acceptance of connections or packets in the network
- 3. protocol deliver data units over a network composed of the links established through the DLC protocols
- 4. responsible for transferring data to/from the link adapter

- 6. the fluctuation of delay
- 7. protocol establish end to end communication between end systems over the network defined by a layer 3 protocol
- 9. enables application programs and computing devices to exchange messages over a network
- 11. protocol establishes point to point communication over a physical link
- 14. set of rules governing the format of data sent via the internet
- 18. a computer networking technology used to build local area networks
