

Non-Renewable/Renewable Resources

Across

- 1. non-renewable resource; used as a fuel that is processed underground
- 6. non-renewable resource; used as a fuel in nuclear reactor
- 10. a renewable resource; making power by the waves force
- 11. non-renewable resource; used as a fuel and to make a fire
- 13. a change in the environment that can harm living organisms

14. a renewable resource; energy that is made by the heat of the molten interior of Earth

15. a renewable resource; power of harnessing wind to use as power/energy

Down

- 2. a resource that can not be replaced with in a humans life
- 3. a resource that can be replaced with in a humans life
- 4. gasses that help the greenhouse effect

5. non-renewable resource; used as fuel to make things work(ex. transportation)

7. a renewable resource; natural sunlight used to mae power/energy

8. a renewable resource; organic matter used as fuel

9. a renewable resource; the force of water creating power

12. a change in regional or global weather pattern

Word Bank

- wind power
- oil
- greenhouse gasses
- pollution
- renewable resource

- natural gas
- tidal
- biomass
- geothermal energy
- climate change

- solar energy
- coal
- non-renewable resource
- uranuim
- hydropower
