

Name: \_\_\_\_\_

# Objects in Space

## **Across**

- 2.** A star at the center of the solar system that looks like a large ball of light.
- 7.** A large body in space that orbits a star and does not produce light of its own
- 8.** any visible balls of gas visible from the Earth at night
- 9.** A ball of frozen dust and rock that orbits the sun and has a tail that glows
- 10.** chunk of rock or dust in space

## **Down**

- 1.** any natural satellite of a planet
- 3.** a system of millions or billions of stars, together with gas and dust, held together by gravitational attraction.
- 4.** a meteorite that survives the trip through the atmosphere and hits the ground
- 5.** chunk of rock or dusk that enters the Earth's atmosphere
- 6.** any of numerous small celestial bodies composed of rock and metal that move around the sun (mainly between the orbits of Mars and Jupiter)
