

# Ocean Acidification

## Across

1. This region has seen a decline of ocean surface aragonite saturation

4. This marine species cannot develop their exoskeletons due to high acidity

8. Industry that faces the most danger from OA

10. Decreasing pH levels

12. OA is the change in the oceans \_\_\_\_\_

13. 90% of global CO<sub>2</sub> emissions come from the burning of these

## Down

2. Emission trading policies must adjust these

3. Rising levels of this in the atmosphere have caused ocean acidity to rise

5. The Great Barrier Reef is located in this country

6. These are changing drastically due to acidification

7. Emission trading policies

9. These act as natural buffers to re-stabilize the ocean

11. These underwater ecosystems are rapidly declining throughout the ocean
