

Oceanography

Across

- 2. area of intense volcanic activity
- 5. tall volcanic peaks on the ocean floor
- 9. flat, underwater plain on the deep ocean floor
- 11. the substance that continental crust is made of
- 12. deepest parts of the ocean occurring on convergent plate boundaries
- 13. very shallow zone of the ocean

- 14. the layer of the ocean that is the lowest
- 16. an underwater mountain resulting from divergent plate boundaries
- 19. the measurement of the ocean depths
- 20. plate boundary where two plates converge

Down

- 1. ridge of rock in the sea formed by the growth of coral
- 3. steep, V-shaped canyon in the continental shelf/slope
- 4. deep zone of the ocean

- 6. an opening in the sea floor from which heated water flows
- 7. the most dense part of the Earth
- 8. unit of depth in the ocean; =1.83 meters
- 10. the type of crust that is found under the ocean
- 15. plate boundary where two plates slide against each other
- 17. the plate boundary where two plates diverge away from each other
- 18. the mostly fluid layer of the Earth
