

Name: _____

PLATE TECTONICS

Across

- 6. A allows magma to escape from the mantle onto the earth's surface
- 7. The acronym from the type of rock the Continental crust is made of...
- 8. The acronym for the type of rock the oceanic crust is made of...
- 11. Steep depressions in the deepest part of the ocean
- 12. Plate margin where one plate is subducted under the other plate

- 13. plate margin where two plates slide past each other
- ## Down

- 1. Causes plates to move and moves in an ascending or descending manner
- 2. Underwater mountain range formed by plate tectonics
- 3. The thick part of the Earth's crust that forms large land mass

- 4. An occurs when two plates slide past each other due to the build up and release of pressure
- 5. plate margin where new crust is formed
- 9. The zone where one crust melts under the other crust as it re-enters the mantle is known as the
- 10. Usually is subducted under the continental crust
