

# Parallel Lines

## Across

2. A point that divides a segment into two congruent parts  
 3. Slope of a vertical line  
 7. A line that intersects two or more other lines.  
 8. Angles between the lines cut by a transversal  
 11. The longest side of a right triangle  
 15. An equation in the form  $Ax + By = C$   
 16. The steepness of a line

17. The slope of a line going upward left to right  
 18. Equation in the form  $y=mx+b$   
 19. This line has a slope of zero  
 20. Lines that intersect and form a right angle

## Down

1. A ray, point or line that divides something in half  
 4. Another name for same side  
 5. Acronym to remember slope

6. Lines that intersect at a right angle  
 9. A property that replaces one value with another  
 10. A statement accepted as true  
 12. A pair of angles where both are on same side of transversal one is located inside parallel lines and one is outside  
 13. A statement proven from a postulate  
 14. Lines that never intersect
