

Peds Reflexes

Across

- 6.** Protects from damaging stimuli
- 8.** Reponse: Turning head to same side with mouth open. Normal age of response: 28 weeks of gestation to 3 months
- 9.** Response: When head is in flexion, arms are flexed, legs extended. When head is in extension, arms are extended, legs are flexed Normal age of response: 6-8 months
- 12.** Extension response to being in prone Persists: Cant go into flexion; trouble creeping
- 13.** Toe flexion. 28 weeks gestation to 9 months.

Down

- 1.** Response: Arm and leg on face side are extended, arm and leg on scalp side are flexed, spine curved with convexity toward face side Normal age of response: 6-8 months "Fencing reflex"
- 2.** Response: In supine: body and extremities are held in extension/ In prone: body and extremities are held in flexion Normal age of response: birth to 6 months
- 3.** Stimulus: head dropping into extension suddenly Response: Arms abduct with fingers open, then cross the trunk into adduction Normal age of response: 28 weeks of gestation to 5 months

- 4.** Stimulus: loud, sudden, noise Similar to moro response but elbows remain flexed and hands closed Normal age of response: 28 weeks of gestation to 5 months
- 5.** Flexion of the fingers causing strong grip. Birth to 4 months.
- 7.** Response: Stiffening of legs and trunk into extension Normal age of response: 35 weeks gestation to 2 months
- 10.** Stimulus: Supported upright position with soles of feet on firm surface Response: Reciprocal flexion/extension of legs Normal age of response: 38 weeks gestation to 2 months
- 11.** Reponse: Lateral flexion of trunk to side of stimulus Normal age of response: 30 weeks of gestation to 2 month
